PROFESSIONAL SUMMARY

Full Stack Developer with 3-4 years of hands-on experience building, deploying, and maintaining production-ready web applications. Proven track record delivering end-to-end features across React frontends, Node.js/NestJS backends, PostgreSQL databases, authentication systems, and payment integrations. Experienced in taking technical ownership of projects, collaborating across teams, and shipping real-world applications with clean, scalable architecture.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL

Frontend: React, React Router, HTML, CSS

Backend: Node.js, NestJS, Express, REST APIs

Databases: PostgreSQL, Prisma, TypeORM

Authentication & Security: OAuth, JWT, Supabase

Payment Systems: Stripe Checkout, Stripe Webhooks

Cloud & Media: Cloudinary

Tools & Other: Git, Adobe Suite, Jest, WebSockets

PROFESSIONAL EXPERIENCE

Full Stack Developer (Project Lead) | Kino - Movie Theater Ticketing Platform

December 2025

- Led end-to-end development and deployment of a cinema ticketing platform enabling users to browse movies, select showtimes, reserve seats, and purchase tickets online

- Architected and developed RESTful APIs using NestJS to manage movies, showtimes, branches, rooms, orders, and seat reservations

- Built responsive React frontend features for user flows including browsing, checkout, seat selection, and ticket confirmation

- Designed and implemented PostgreSQL database schema using TypeORM, handling complex relationships and transactional workflows

- Integrated Stripe Checkout and webhook handling for secure payment processing

- Implemented authentication and authorization using Supabase, OAuth, and JWT

- Integrated Cloudinary API for image uploads and media management

- Coordinated frontend and backend development efforts, unblocked technical challenges, and delivered project on schedule

- Successfully deployed application to production with full end-to-end functionality validation

Full Stack Developer | Thoughtspill - Book Notes & Blog Platform

- Developed a personal book-tracking and blogging platform for publishing reading notes and reflections

- Implemented decoupled microservices architecture with Express backend API, public React frontend, and private React admin application

- Designed role-based authentication system separating admin and public user access

- Built RESTful APIs for content management and data retrieval

- Architected system for flexible scaling and modular development with clean separation of concerns

Full Stack Developer | Comet - Real-Time Messaging Application

- Developed lightweight real-time messaging application focused on speed and user experience

- Implemented secure user authentication and one-to-one private chat functionality

- Built WebSocket-powered real-time messaging system for instant communication

- Designed responsive React interface optimized for desktop and mobile devices

- Managed backend services for message handling, user sessions, and data persistence

Full Stack Developer | Find It - Interactive Game Application

- Built interactive "Where's Waldo"-style game where users search for hidden characters in themed illustrations

- Developed frontend using React and React Router for smooth navigation and state management

- Implemented backend game logic using Express API

- Managed persistent game data using Prisma with relational database

- Designed clean API architecture and scalable data models

EDUCATION

Full Stack Web Development Bootcamp

SoyHenry | Completed 2025

Self-Taught Developer

3-4 years of independent, project-driven learning across frontend development, backend systems, database design, and system architecture

ADDITIONAL INFORMATION

- Languages: Fluent in English and Spanish

- Location: Mexico City, Mexico

- Interests: Building end-to-end products, system design, user-focused experiences

- Available for remote and on-site opportunities
